# BlueFletch

The BlueFletch Toolset

Transform the way you access, manage, and secure shared workforce devices.

Discover Your Frontline Transformation Potential

Retailers with frontline workers using shared devices face a range of challenges—security risks, clunky login processes, inefficient device management, and rising costs from lost or misplaced devices. BlueFletch is the leading all-in-one solution designed to tackle these issues head-on. By simplifying authentication with advanced SSO, enhancing security, and providing robust device accountability and analytics, BlueFletch streamlines device management and minimizes downtime. Protect your devices and boost workforce productivity with BlueFletch—the best solution for secure, scalable device management and protection.

Unparalleled Security	**Streamlined Device Management**	**Significant Cost Savings**	**Employee Satisfaction**
Reduce unauthorized access to sensitive data and seamlessly integrate into existing security infrastructures	Gain total visibility and control over your device fleet with login data, device tracking, and remote management	Minimize downtime and support tickets through single sign-on (SSO) and authentication	Deliver a familiar and intuitive experience that removes cumbersome authentication processes and boosts efficiency

45% of data breaches among companies are caused by lost or stolen devices.

More than 1 in 3 organizations cited their current MDM solution's lack of quality analytics as an issue.

Annual support costs for enterprise mobile devices average $770 per device, with the average help desk support call taking 44 minutes for issue resolution.

The average number of mobile apps used daily by frontline workers increased 86% in the last 5 years.

Powerful Add-Ons

BlueFletch Chat
Secure and versatile communication designed for frontline workers on shared devices.

Password Manager
Capture and play back passwords for systems that don't have federated SSO (e.g., legacy applications with different passwords).

BlueFletch Identity
An identity platform that supports seasonal workers, vendors, and advanced login scenarios around PIV and Biometric login.

Remote Control
A powerful tool to remotely view, control, and support your entire device fleet.

Playbook Agent
Google-validated EMM solution designed explicitly for supporting rugged Android devices.
